Individual Web Page Assignment

In this assignment you are going to create a personal web page without using a template. This web page will ask you to use the scanned picture and the digital picture of yourself. Most of the elements will be things that you have already done in the previous assignments. To learn how to do the new elements use the help menu or use your knowledge of Word to experiment until you find the right steps.

Since you are using the digital picture of yourself on the first page, the homepage will be of a personal or professional nature. The remaining two pages may be on topics of your choice.

1. Your assignment must have a home page and a least two links to companion web pages.

2. On the homepage have the following elements:
   - Color background
   - WORD ART heading
   - Horizontal line
   - The digital picture of yourself
   - Hyperlinks to your other pages
   - Animated gif
   - Text – You may put as much text as you want. However, there must be enough text to interest the reader and explain the links to the two additional pages.

3. On one of the two remaining pages you should include your scanned picture. The pages may be on any topic that you choose. There should be enough text on the pages to interest the reader. One page should have links to the WWW. Both pages should have some type of graphic and active links to return to your homepage.

4. Print out a copy of the pages with your name on them and turn them in or email all three of them.
