SEARCHING THE INTERNET WITH KEYWORDS AND URLS

Open a Word document, put the heading "Keyword and URL Internet Assignment of (your name)".

Perform the following search and copy and paste the answers to the following questions on your Word document.

Search: Go to the search engine, google. In the search box type: "University of Florida" [Be sure and use quotes.]

Select the first site that was found in the search. Click on the link that would provide the most information about admissions to the University of Florida. The Office of Admissions homepage should appear. Choose a link under the three categories on the main page and select the appropriate site under that category to answer the following:

1. What is the deadline for admissions for Freshmen and Sophomore transfer students for the next Spring semester? (Copy this date and paste it in your Word document.)

2. What is the estimated annual estimated expenses for Florida undergraduate students? (Copy and then paste this information on your Word document.)

3. Copy the relevant information for one scholarship that is available to Florida residents and paste it in your Word document.

4. Copy and paste the list of different majors at Florida that are available in the Education and Teaching.

5. Go back to the University of Florida Homepage, click on the picture of the bell tower (or the picture on that page) until you find a picture of the football stadium. Save that picture in your folder and then insert it as a picture into your Word document. Resize it to make it one-half as big as it was.

6. On the Florida homepage type the name this course: EME 2040 in the search box. Following the links at this site, find and then paste the course description into your Word document. Use the back arrow key to return to the Florida homepage.
7. Return to the Google Homepage. Choose a two or more word phrase that might help you find a lesson in your subject or grade level. (for example: mathematics lessons or elementary mathematics lessons). Type these words on your Word document. Perform a search on Google by typing these words without quotes and record how many pages (hits) you get on your Word document next to the two words. (The number of hits will be listed in the blue border at the top of the page.) Do the search again by typing the same words but this time put quotes around the two words. Record the number of new hits that you get on your Word document. These two numbers are different because the quotes around words only identifies sites that have those two words side-by-side instead of just in the document. Using quotes will help narrow your searches and let you find relevant sites more quickly.

8. From these hits, choose two lessons that would be applicable to your area. Record the Uniform Resource Locators (URLs) of these sites into your Word document. [Hint: Copy and paste will work.]

9. Use the URL, www.firm.edu, to locate the Florida Information Network homepage. Select Instructional Resources and then K-12 Resources. Find an instructional resource for your area. Copy a few lines of it (no more than ten) and paste it in your Word document. If there is not any lessons for your particular area, choose a related area.

10. Print your Word document and turn it in or e-mail it.
