Entrance Requirements

This program prepares students to become engineering technicians. These technicians use the principles and theories of science, engineering and mathematics to solve technical problems in research and development, manufacturing, sales, construction, inspection and maintenance. Many engineering technicians work with engineers as part of an engineering team, translating the engineer's designs into actual products.

All Associate in Science degree students must complete the required English and mathematics courses with a grade of "C" or higher.

Students must complete the following **bold** Engineering Technology courses with a grade of "C" or higher.

Completion of the Technical Core courses included in the first year meet requirements for leading to MSSC-CPT Certification. Students who present current MSSC-CPT Certification or prior completion of the Technical Core can receive 15 credit hours toward this degree. Completion of the Specialization Core courses in the second year meet requirements leading to certification in Advanced Manufacturing: Pneumatics, Hydraulics, and Motors.

While academic advisors, faculty and staff provide significant academic planning and related assistance to students, completion of all degree requirements, and the process of monitoring progress to that end, is ultimately the responsibility of the student.
